

Typography Definition

Typography refers to the art and technique of arranging typefaces, fonts, and text elements in a visually appealing and readable manner. It encompasses the design, selection, and arrangement of characters, letters, numbers, symbols, and other typographic elements to communicate information effectively.

Typeface

Typeface: A set of characters that share a common design style. Examples of typefaces include **Arial**, **Times New Roman**, **Helvetica**, and **Garamond**.

The vertical spacing between lines of text, which affects the overall legibility and appearance of the text.

Kerning

A ↔ B ↔ C ↔ D ↔ E

Kerning is a crucial concept in graphic design and typography, referring to the adjustment of the space between individual characters in a text. It is used to achieve a visually pleasing and balanced appearance of the text by ensuring that the spaces between letters are harmonious and consistent.

Typographic Art

Images

Images play a crucial role in graphic design, as they help convey messages, evoke emotions, and enhance the overall visual appeal of various design projects.

Raster

Raster images, also known as bitmap images, are a grid of individual pixels. Each pixel holds specific color and tonal information, collectively forming an image. One limitation of raster images is that they are resolution-dependent. Enlarging a raster image beyond its original dimensions can result in a loss of quality known as pixelation.

Vector

One of the key benefits of vector images is their scalability. Since vector graphics are based on mathematical formulas, they can be resized to any dimensions without any loss of quality. This makes them ideal for tasks such as logo design, where the same image needs to be used across a variety of sizes and mediums.

Cropping

Cropping images is a powerful technique in digital image editing that involves removing unwanted portions of a photograph or graphic to focus on a specific subject or improve the composition

Resizing

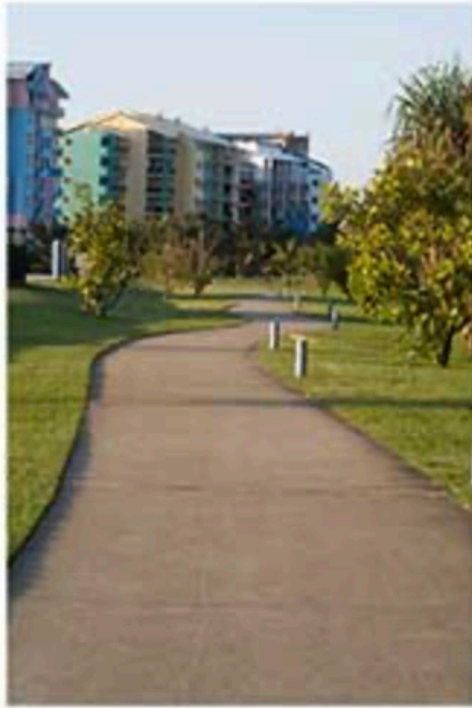

Resizing images is a fundamental aspect of digital image manipulation that involves changing the dimensions of an image, either by reducing or enlarging its size.
